The year is 2393, and the world is almost unrecognizable. Clear warnings of climate catastrophe went ignored for decades, leading to soaring temperatures, rising sea levels, widespread drought and—finally—the disaster now known as the Great Collapse of 2093, when the disintegration of the West Antarctica Ice Sheet led to mass migration and a complete reshuffling of the global order. Writing from the Second Peoples Republic of China on the 300th anniversary of the Great Collapse, a senior scholar presents a gripping and deeply disturbing account of how the children of the Enlightenment—the political and economic elites of the so-called advanced industrial societies—failed to act, and so brought about the collapse of Western civilization. In this haunting, provocative work of science-based fiction, Naomi Oreskes and Eric M. Conway imagine a world devastated by climate change. Dramatizing the science in ways traditional nonfiction cannot, the book reasserts the importance of scientists and the work they do and reveals the self-serving interests of the so-called carbon combustion complex that have turned the practice of science into political fodder. Based on sound scholarship and yet unafraid to speak boldly, this book provides a welcome moment of clarity amid the cacophony of climate change literature.

Just so you know, I am a PhD marine scientist and I have been studying and teaching environmental science, including climate change, for over 20 years. One of the biggest problems with scientific discoveries is that scientists seldom publish their work in a forum or a form that is accessible or understandable to the non-scientific community of voters, policy makers, et al. This short book/long essay by Naomi Oreskes and Eric Conway is a fantastic addition to the conversation on climate change and its potential effects. If you are looking for a sci-fi novel, look elsewhere. If you are looking for an overview of what climate change or climate science is, look elsewhere. But if you are interested in considering intersections between science, communication, business, history, creative thinking and climate change then this little book is for you. FYI, this is not a light version of Merchants of Doubt (also a fantastic read). This book is instead, a way to consider the path we are on and seem determined to stay on with respect to climate change regardless of what science discovers and which actions it recommends. The writing is clear and concise, but not what I call brilliant though the ideas presented are. We are on a downward slope and have been for decades when it comes to climate. We know the causes of climate change. We know the effects, current and future if we don’t change. This book outlines much of what science can predict with confidence. The one criticism I have is that the authors resort to a techno-fix for climate change rather than letting it run its course. Perhaps the alternative was simply too bleak to imagine…5 stars. Important message…should be read by everyone.
